

TELUS Fleet Tracker

A more efficient fleet starts with more effective management tools.

The more you know about every vehicle your business owns or leases the more control you have in running your fleet operations efficiently. Ensure that every driver follows best practices by pinpointing the real-time location of each vehicle, knowing how long it stops at various points, how fast it travels, how long it idles and more. It will also enable you to cut maintenance costs by ensuring that preventative action is taken before a minor issue becomes a major problem.

Real-time insights can lead to real savings.

TELUS Fleet Tracker is a simple plug and play solution, and can be self-installed in any vehicle type. Once installed, it delivers valuable, actionable information about your vehicle and drivers, on the road or at the job site. It allows you to:

- **Monitor fuel usage and excessive speeding:** Cut fuel and maintenance costs and avoid fines
- **Track idle time:** Prevent unnecessary idling and potentially save thousands of dollars a year
- **Manage vehicle maintenance:** Schedule regular service and emission tests to prolong the life of your vehicles with maintenance interval (mileage, odometer readings, etc.) notifications
- **Track real-time vehicle location:** Know that every vehicle is in the right place at the right time, prevent unauthorized or private use of company vehicles, locate the closest available vehicle when new job orders come in and provide accurate times of arrival to improve your customer service
- **Access detailed views of your fleet and personnel:** Be informed at all times with a choice of twenty-five detailed operational reports that allow you to gain insight into the performance of any individual vehicle or driver or your entire fleet

You can even add additional sensors, giving you the ability to track vehicle temperatures, door openings and closings, driver ID and more.

Add additional modules to increase productivity and savings.

TELUS Fleet Tracker offers a range of additional modules to meet your needs.

- **TELUS Fleet Complete – Electronic Logging Device and Hours of Service solution:** Comply with new U.S. and expected Canadian regulations requiring most commercial vehicles to implement Electronic Logging Device (ELD) systems that track drivers' hours of service. Drivers can track their hours of service easily and quickly on their smartphones, with no additional hardware required.
- **TELUS Fleet Tracker with myFleet Solution from Intact Insurance¹:** Receive an implementation discount on TELUS Fleet Tracker and add potential savings on insurance premiums through improved fleet performance.

Shift up to better fleet management today.

See what you can save with TELUS Fleet Tracker.

By simply knowing more about your vehicles, you can dramatically reduce expenses resulting from:

- **Excessive idling:** A vehicle with a 5 L engine wastes over 0.5 L per 10 minutes of idling (3 L over an hour)²
- **Speeding:** Traveling at 120 km/h verses 100 km/h increases fuel consumption by 20%³
- **Careless conduct:** Harsh braking and rapid acceleration reduces fuel economy by 15% in the city³
- **Inefficient routes:** Separate trips of less than 5 km do not allow a cold engine to reach its peak operating temperature, resulting in increased fuel consumption and emissions
- **Insufficient maintenance:** Poorly maintained vehicles can consume more fuel and negatively affect the performance of the vehicle which may result in expensive repairs³
